EECE430 Project- Spring 2022

Sports Club Management System (SCMS)

Project Description

A sports club wishes to extend its activities. None of the existing sports club management tools meets the club requirements. The club president asked a software development team to develop a new club management system that meets its emergent needs.

Proposed Steps for Software Project Development:

1- Feasibility Study.
2- Clarify the problem: Specify and validate the requirements.
3- Design a solution: Architectural Design, System Design…
4- Implement: Write and/or reuse code…
5- Testing the system

The project will be developed in teams of 5-6 students through a sequence of assignments.
